Fluoride Varnish

A healthy choice for your child's teeth

- Fluoride (flor-ide) is an element naturally found in the environment
- It protects our teeth from cavities
- It can be found in drinking water, toothpaste, rinses, and prescribed supplements

- Fluoride varnish is dental treatment given to kids to help prevent cavities
- During the treatment, a trained professional paints fluoride onto your child's teeth
- the treatment is quick, easy and painless

- If you are interested in this treatment for your child, contact your pediatrician or dentist
- They will discuss this and other fluoride treatment options for your child
- Medi-Cal benefits cover up to 5 fluoride varnish treatments per year for children ages 0-5 (3 at the pediatrician's office and 2 at the dentist)

- For more information about fluoride varnish and healthy teeth for your children visit the Centers for Disease Control website at:
<https://www.cdc.gov/oralhealth/basics/childrens-oral-health/index.html>
